ABOUT ISACs

Information Sharing and Analysis Centers (ISACs) are non-profit, mainly private sector, member-driven organizations specific to the critical infrastructure sectors and subsectors. ISACs, established in 1998, help critical infrastructure owners and operators protect their facilities, personnel, and customers from cyber and physical security threats and other hazards. This is accomplished by collecting, analyzing, and disseminating timely actionable threat information to their members and providing members with tools to mitigate risks and enhance resiliency. ISACs have broad reach within their sectors, communicating critical information far and wide to maintain sectorwide situational awareness, and collaborate through the National Council of ISACs.

ABOUT HEALTH-ISAC

Health-ISAC — a non-profit, private sector, member-driven organization — plays an essential role in providing situational awareness around cyber and physical security threats to the Health Sector so that companies can detect, mitigate, and respond to ensure operational resilience. Health-ISAC connects thousands of health security professionals worldwide to share peer insights, real-time alerts, and best practices in a trusted, collaborative environment. As the go-to source for timely, actionable, and relevant information, Health-ISAC is a force-multiplier that enables health organizations of all sizes to enhance situational awareness, develop effective mitigation strategies and proactively defend against threats every single day.

ABOUT HEALTH-ISAC'S MEMBERS

Health-ISAC membership connects a diverse body of Health organizations to form one community focused on improving health and saving lives. We are better together!

Globally, Health-ISAC Members Include:

- Academic Medical Centers Animal Health Biotechnology/Genomics Blood and Organ Banks Clearing Houses Consumer Health Electronic Health Record System Providers Healthcare Delivery Organizations Health Information Exchanges (HIE) Hospice Insurance Companies Laboratories
- Medical Device Manufacturers Medical Group Purchasing Organizations Medical Material Manufacturers and Distributors Medical Research & Development Centers Medical Technology Pharmaceutical Manufacturers Pharmacies Public Health Sector Radiological Centers Revenue Cycle Management Telehealth Providers

WELCOME FROM THE PRESIDENT AND CEO

Denise Anderson President and CEO Health-ISAC

My grandmother always had a toy cupboard that we kids knew to go to whenever we visited, and in it was a wagon full of wooden building blocks* - the kind that had alphabet letters and numbers on them. What kid doesn't like to stack the blocks up and then knock them over? I was a little different in that I liked to stack them up and have them stand. I learned that the wider the base, much like the Egyptians discovered with the pyramids, the stronger the structure. Of course, skyscrapers** today don't have the luxury of space, so they rely on depth and bedrock. Bedrock is the first building block of a sturdy building, which keeps the foundation solid and allows the building to withstand forces such as wind, seismic activity, and weight.

Foundations are the bases upon which we can build larger and more complex things, and we need them to be solid to allow for development. For example, in math, we learn addition and subtraction before we can do algebra. In kindergarten, we learn how to communicate, solve problems, and behave so we can be successful in life. In security, we start with basic elements like strong passwords (although passwords are becoming obsolete) and firewalls before we move on to more basic but stronger protections and, ultimately, more complex mitigations.

"Foundations are the bases upon which we can build larger and more complex things, and we need them to be solid to allow for development."

> When it comes to information, sharing Indicators of Compromise (IOCs), Tactics, Techniques and Procedures (TTPs), alerts, thought leadership and more, results in situational awareness, strategy, and preparedness, which makes organizations, regions, countries, and ultimately the global health sector more secure and resilient.

I hope you will enjoy learning all of the many things we did as a Health-ISAC community in 2024 to create the 'foundational blocks' to build sector resilience.

Denise Anderson President and CEO, Health-ISAC

Fun Facts

- * The global wooden toys market is estimated to reach \$27.28 billion in 2024
- ** The world's tallest building, the Burj Khalifa has a foundation of more than 164 feet deep – the equivalent of a 15-story building

The Building Blocks of Resilience

COLLABORATION IN ACTION

In 2024, Health-ISAC Member organizations operated in more than 140 countries, constituting a global reach across 71% of the world. Health-ISAC leadership participated in over 118 speaking engagements, 222 media mentions, and 75 interviews spreading the word about collaborating for resilience in the health sector. 178 new Member organizations joined Health-ISAC's community throughout the year, and the 97% retention rate shows the value gained from collaboration in this community. "Working with the Health-ISAC and all the members has been one of my best professional experiences."

"The people of Health-ISAC work tirelessly to provide opportunities and platforms for the Members, and they do an incredible job at engaging and inciting us."

Barbee Mooneyhan CISO

Member Community: The Foundation for Success

Members are the heart of Health-ISAC. Through trusted relationships, collaboration, and open information sharing, they actively drive and shape member-focused initiatives. The Member Engagement Team has a vital role in this process, providing personalized guidance, direction, and support tailored to each member's unique needs. By fostering these connections, members are able to access and engage with offerings that matter most to them, ensuring they derive maximum value from their membership and contribute meaningfully to the community's collective success.

"We just joined the community, so we've barely scratched the surface; but we're already getting an IMMENSE amount of value from our membership!"

Keith Lawson CISO, London Health Sciences Centre

MEMBER-DRIVEN INITIATIVES

Health-ISAC supported many member-driven initiatives through collaboration in working groups, summits, workshops, and peer-topeer discussion channels. Members came together to share initiatives and best practices and generated a number of white papers and other projects.

Health-ISAC Annual Member Satisfaction Survey

Health-ISAC received an outstanding response from its members through the annual Membership Survey in 2024. Health-ISAC was rated with a Net Promoter Score of 68, signifying a high level of satisfaction and willingness to recommend membership to others.

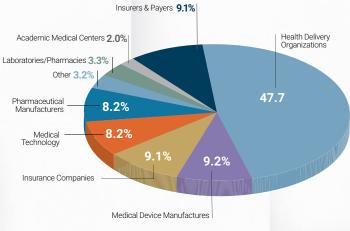

Health-ISAC connects security professionals within a large range of health organizations, from a regional clinic to a global health system, from a medical school to a medical device manufacturer.

"I've had the opportunity to engage with Health-ISAC and found their resources invaluable! The collaborative environment fostered by Health-ISAC allows for sharing best practices and learning from peers across the health sector, which significantly strengthens our overall security strategy."

Miguel Angel Sanchez Valdez

Global Business Information Security Manager Novartis

Leaders in the Industry

Health-ISAC Membership represents different sizes and sections of the Health ecosystem, from <\$1M annual revenue to \$250B in annual revenue. The more organizations collaborate within Health-ISAC, the more resilient the global Health Sector becomes.

Member Composition

Building Blocks of Intelligence

Health-ISAC's Threat Operations Center (TOC) provides in-depth and wide-reaching analysis of actionable cyber and physical threat intelligence to Members. Members use this information for timely action against phishing, ransomware, and other threats. Examples of TOC-produced intelligence include pre-public alerts, targeted alerts, vulnerability & threat bulletins, benchmarking surveys, situational awareness & physical security reports, daily cyber headlines, and webinar discussions for up-to-the-minute details on current threats. TOC analysts work with intelligence partners to monitor events and assess additional opportunities to provide value to membership.

BUILDING BLOCKS OF ACTIONABLE DATA

Health-ISAC Expansion in APAC:

On November 4, Health-ISAC and CyberCX partnered on a Joint Research Bulletin discussing the potential impacts of the US BIOSECURE Act. The draft legislation would prohibit federally funded health entities from using biotechnology from adversarial nations such as China and would likely result in disruption to global supply chains. Health-ISAC will continue to expand the member base and services in APAC in 2025.

Physical Security: Building Strength from the Ground Up

The Physical Security initiative at Health-ISAC has continued to grow throughout 2024. The Physical Security Working Group has acquired 78 members, hosting a meeting every month. The Health-ISAC Spring and Fall Americas Summits have begun to cater more significantly to the physical sector, with a workshop at both summits and multiple sessions focusing on physical security and blended security topics. Progress made in incorporating the physical security professionals from within the membership will continue in 2025, increasing outreach efforts to expand the community with vendor partnerships and member participation.

Partnership with AHA:

Health-ISAC continued its partnership with the American Hospital Association (AHA), collaborating on a number of strategic intelligence reports and bulletins in 2024. For example, on June 26, and August 1, Health-ISAC and the AHA published joint threat bulletins on the impacts of ransomware attacks targeting the medical supply chain. The reports highlighted a spate of attacks by Russian ransomware gangs such as QiLin and BlackSuit that impacted the distribution of blood and plasma supplies in the US and Europe, causing massive disruption to patient care.

Top Incidents & Vulnerabilities of 2024

Health-ISAC's Threat Operations Center (TOC) disseminated over a thousand Vulnerability, Threat, and Incident bulletins throughout the year. Below captures a selection of the most prevalent incidents and vulnerabilities during 2024.

Laying the Groundwork

BUILDING RESILIENCE IN EUROPE

Health-ISAC remains committed to its mission in Europe, fostering a connected community and providing a platform focused on addressing cyber and physical threats to the health sector across the region.

In 2024, Health-ISAC launched the European edition of the Monthly Threat Briefing, offering tailored insights into current cyber and physical threats. This initiative ensures members stay informed and prepared for evolving challenges. "As always: great content, great networking and discussions, and especially a great cultural extra."

Hans-Martin von Stockhausen About the European Summit

Under the leadership of European Operations Director Vasileios Mingos, Health-ISAC has advanced efforts to enhance the region's health sector resilience. The European staff have shared global insights, spoken at seven conferences, and participated in multiple workshops, driving impactful collaboration and knowledge-sharing.

Health-ISAC also contributed to the European Cybersecurity Month's kick-off event, hosted by the European Economic and Social Committee (EESC) and the European Committee of the Regions (CoR), where health sector cybersecurity was a key focus.

Health-ISAC European Hobby Exercise

Building up from last year's success, the second Hobby Exercise took place on October 15th in Athens, Greece. Over 40 participants from multiple organizations contributed in the discussions around simulated real world events affecting the European health sector.

"Being [my] first time at this event, it really opened my mind that Health-ISAC could be actually utilized in a practical way. Also, people here are just keen to help you in any way. They will share common problems/ solutions and also help you if you are stuck on your work path."

Bartlomiej Bedkowski Eurofins GSC IT Poland About the European Summit

A Cornerstone for Medical Device Security

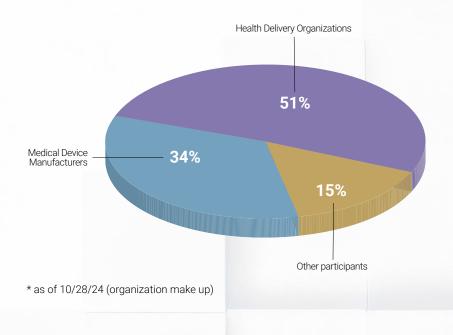

In 2024, Health-ISAC significantly expanded its efforts to unite Medical Device Manufacturers and Health Delivery Organizations, aiming to enhance the security of medical devices and thereby supporting patient safety. In January, the Medical Device Security Council launched a European chapter to address regulatory and medical device issues specific to that region. This was followed by the inaugural meeting of the Western Pacific chapter, which serves members in the Western region of Oceania. The number of participants grew to 480, and the number of organizations increased by more than 26%, reaching 183 organizations.

To support this growth, Health-ISAC added a Medical Device Security Analyst to its staff. Taylor Porter is a recent graduate of the University of Central Florida (UCF) and interned at the Threat Operation Center in the Spring of 2024. Her new role has enabled Health-ISAC to publish medical device alerts through Health-ISAC's Threat Intelligence Portal (HTIP.) These alerts include cyber-related FDA medical device recalls, CISA ICS medical advisories, manufacturer vulnerability disclosures, and independent Health-ISAC research that uncovered several Known Exploited Vulnerabilities (KEVs) associated with medical devices. After contacting the medical device manufacturers for updated information, Health-ISAC shared these alerts with health providers through HTIP and the FDA. "A lot of these medical devices have been around and implemented before security was top of mind and before security was a big concern and now we're really seeing how cyber incidents can lead to physical real world impacts."

Ellen Lakin Health-ISAC Member

Medical Device Security Council Composition

Phil Englert, VP of Medical Device Security, spoke at 14 Health Technology Management conferences and symposiums this year, urging biomedical professionals to play a larger role in maintaining the cyber-resilience of medical technologies. By collaborating with IT, Risk Management, and Clinical Leadership, biomedical technicians are taking a frontline role in ensuring that medical technologies are available and safe for patient care.

"We're looking for that workable middle ground. We can always come up with solutions that are not sustainable, but this is where, together, we find effective, efficient, and actionable methods of securing medical device environments."

Phil Englert

The Power of Collaboration for Health Sector Resilience

HEALTH-ISAC GLOBAL SUMMITS

Health-ISAC Summits unite top health sector leaders, cybersecurity experts, and innovators from around the world to confront the most urgent challenges in health security today.

Summits draw a diverse range of attendees, including CISOs, analysts, engineers, and industry visionaries—each bringing unique perspectives to shape the future of health sector physical and cyber security. "I appreciate the opportunity to connect with many peers and share the best practices for building a security program from scratch and utilizing AI securely and ethically."

ANNUAL MEMBER AWARDS

The Routhy Award

The Routhy Award was created in 2018 in honor of the first Chairman of the Board, Jim Routh. It is awarded yearly to honor other influential forces within health and the information security profession.

The Routhy Award went to Erik Decker, Intermountain Health.

The Securitas Award

The Securitas Award is presented to an individual or team from a Member organization judged to best exemplify collaboration, information sharing, active membership, and increased value to the cybersecurity community in the European region. The Securitas Award is awarded yearly at the European Summit.

The Securitas Award went to Dr. Hans-Martin von Stockhausen, Siemens Healthineers.

The Steve Katz Hero Award

The Hero Award recognizes one Member each year who represents excellence in information sharing. This award has been renamed to honor the first CISO, Steve Katz, and was presented at the Fall Americas Summit.

The Steve Katz Hero Award went to Rachel James, AbbVie.

Complimentary and Discounted Solutions for Member Resilience

Health-ISAC engages with vetted service providers who embody the mission of increasing Health Sector resiliency against all hazards. This unique, solution-based community provides Members with exclusive cost-effective security solutions, offers Members valuable opportunities to evaluate security services with less risk, and expands Member security awareness.

AMBASSADOR PROGRAM

The Ambassador program aims to promote and accelerate the acceptance of a simple message — that a more secure health sector can be created by expanding a community for sharing threats, incidents, and best practices. Health-ISAC's Ambassador program is home to two well-known global brands that can reach health security audiences worldwide.

Learn more about the Ambassador Program: https://health-isac.org/ambassador-program/

Booz Allen.

Andrew Turner, Executive Vice President of Booz Allen's Global Commercial Business, expressed Booz Allen's pleasure in participating in Health-ISAC's Global Ambassador program. He emphasized,

"That to our adversaries, it's one connected battlespace and stressed the importance of information sharing to improve security and bolster the resilience of health operators in Europe, APAC, and North America."

Taylor Lehmann, Director, Office of the CISO, Google Cloud said,

"We are proud to enter our 3rd year working in partnership with Health-ISAC as part of its Ambassador Partner program. From day 1, our organizations have partnered closely to bring tools and resources from Google to help Health-ISAC execute its mission while elevating the Member experience. Google is active in a variety of education programs, intelligence sharing initiatives, working groups, and supporting each other's events. This year, our partnership featured efforts highlighted by the National Security Council (US) as well as a variety of programs that have taken our partnership international. Public-private partnerships are a key to resilience, and we are proud to team up with Health-ISAC's community to help build a stronger, more resilient healthcare ecosystem."

COMMUNITY SERVICES

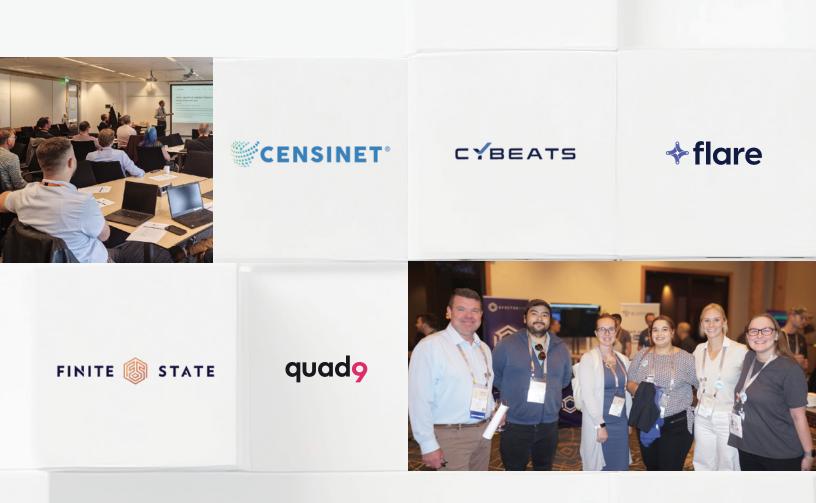

Community Services providers offer their services to Health-ISAC Members at reduced fees or, in some cases, at no cost. In 2024, these 11 vested stakeholders shared their expertise across the Membership community at Health-ISAC Summits and in well-attended monthly lunchtime webinars exclusive to Membership. By providing unique solutions to Members, Community Services Providers increase resiliency for all Members across the health ecosphere, regardless of resource depth.

Building Resilience: Strengthening Global Awareness for Health-ISAC's Mission

In 2024, Health-ISAC was featured in news stories nearly every 1.3 days, reflecting a staggering 396% increase in media mentions compared to the previous year. This significant milestone underscores Health-ISAC's reputation as a trusted and authoritative source for health security information.
